About Me

I exploit the unity of mathematics to obtain concrete results.

I am keenly interested in combining the full power of modern technology, machine learning, and mathematical modeling to understand our world, for fun and profit.

In pure mathematics, I am interested in the structure of absolute Galois groups, spaces whose geometry is determined by their π_1 's, and algebraic and arithmetic geometry of all sorts, with an eye towards making rigidity theorems explicit and applicable to answer foundational questions in algebraic, arithmetic, and differential geometry.

I learn deeply and quickly, and I consider effective communication an important part of all I do.

My website on `github` hosts my publicly available projects and updated vitæ and résumé, and enjoys frequent updates.

Please feel free to contact me with questions, commissions, job offers, and requests.
